SITUATION SUMMARY

Post-Tropical Cyclone Marie, High Surf Event, Impact to Southern California (Final)

- On 8/29/14 as of 0200 hours, the National Hurricane Center (NHC) downgraded Tropical Storm Marie to a Post-Tropical Cyclone due to maximum sustained winds decreasing to near 40mph extending outward up to 125 miles from the center.
- The NHC is forecasting that swells generated by Post-Tropical Cyclone Marie are expected to gradually subside in Southern California as the storm weakens over the next 48 hours; however, life-threatening surf and rip current conditions are still likely as a result of these swells. There are no coastal Watches or Warnings in effect.

Orange County

- The Seal Beach Pier is closed due to one pier failure, unknown when it will be repaired. Inspections will continue when it is safe for boats to go under the pier.

Ventura County

- No additional damages reported.

Los Angeles County

- Long Beach harbor suffered some damage to the breakwater, a road and some water mains. They are managing the issues with local resources.

There are currently no AFN issues and no requests for State assistance.

This will be the final report.

SITUATION SUMMARY

Ebola Virus Disease (EVD) Outbreak, CDPH Weekly Report

- The outbreak of Ebola Virus Disease (EVD) in the West African nations of Guinea, Sierra Leone, and Liberia continues to expand. A cluster of cases has also been identified in Nigeria.
- As of August 28, the U.S. Centers for Disease Control and Prevention (CDC) has reported a cumulative total of 3069 suspect and confirmed cases and 1552 deaths.
- A separate outbreak of EVD was reported this week in the Democratic Republic of Congo (DRC) in Central Africa. Currently there are no clear epidemiologic links with the ongoing outbreak in West Africa and the outbreak of EVD in the DRC.
- There are currently no confirmed or suspect cases of Ebola under investigation in California. At present, the weekly situational assessment for the risk of Ebola infection in California is very low.

SITUATION SUMMARY

Magnitude 6.0 Earthquake, American Canyon, Napa County

SITUATION UPDATE:

On Sunday, August 24, 2014, at 0320 Hours PST, a magnitude 6.0 earthquake struck five miles northwest of American Canyon, CA. The earthquake nucleated at a depth of 10.8km. The shaking intensity in American Canyon and Napa from the “South Napa Earthquake” was a “VII” on the Modified Mercalli Scale, suggesting very strong shaking occurred in the Napa County area. Ground shaking was felt as far south as Salinas, east to Sacramento, and north to Ukiah. USGS estimates that aftershocks should be expected for the next week. The Cal OES Earthquake and Tsunami Duty Officer is in contact with the United States Geological Survey and California Geological Survey and will provide updates.

Aftershocks:

As of 08/29/14 at 0820 hours, there have been 109 aftershocks, four of which are M3.0 or greater (Source: USGS).

Aftershock Probability Report:

At this time (5 days after the mainshock) the probability of a strong and possibly damaging aftershock in the next 7 days is less than 10%. Most likely, the recent mainshock will be the largest in the sequence. However, there is a small chance (approximately 2%) of an earthquake equal to or larger than this mainshock in the next 7 days. In addition, up to 10 small aftershocks are expected in the same 7-day period and may be felt locally. This will be the final aftershock report unless the situation warrants an update.

Area Weather Forecast

Quiet weather is expected across the San Francisco and Monterey Bay Region all work week.

Access and Functional Needs

- Members of the Functional Assessment Service Team (FAST) have joined the American Red Cross's Integrated Care Teams, to provide disability expertise.
- Local Assistance Centers (LAC) will need to be accessible, including bus routes to facilities for individual's who don't drive. The Cal OES Office of Functional Needs (OAFN) offered assistance if needed.
- The Coastal REOC can provide laptops to LAC's to assure communication for anyone who is deaf and uses sign language interpreters and for those with Limited English Proficiency needing other language interpreters.
- In recovery planning, OAFN advised that disability related access fixes (i.e., ramps, grab bars) should be included as an eligible expense when using CDBG or other funding sources.
- The City of Napa has updated their website to include advisories and information regarding water supplies and usage. PG&E will continue courtesy checks for residents.

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

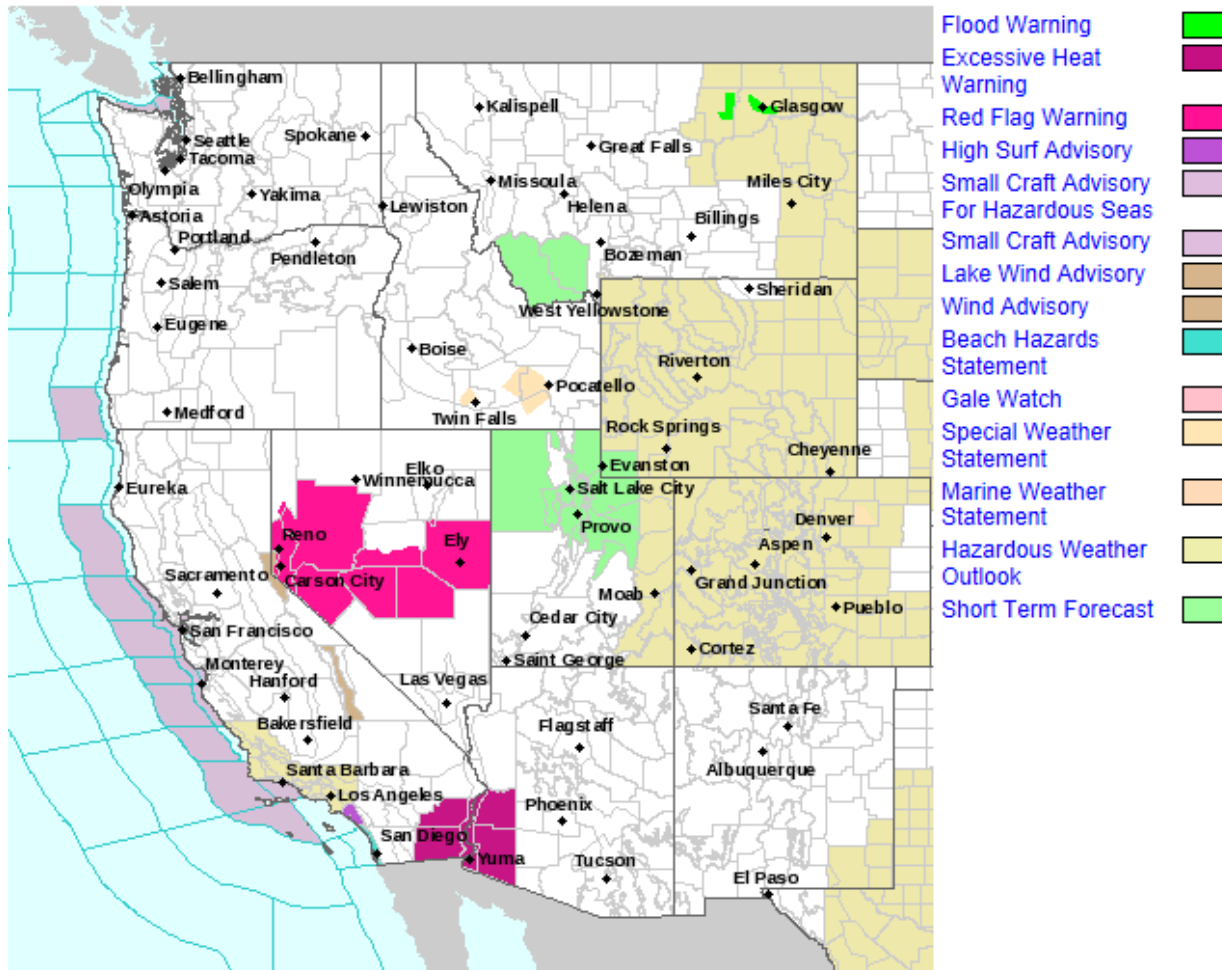

A low pressure trough along the West Coast will deepen today, move over the Northern Operations area Saturday, and continue moving east Sunday. Although plenty of mid and high clouds will continue over the area, precipitation and thunderstorms are not expected. Winds will increase out of the southwest today, especially along and east of the Cascade-Sierra crest where gusts may reach 30-35 mph. Winds will be a bit stronger (gusts to 35-40 mph) out of the southwest to west on Saturday, and become northwesterly late in the day in western areas as the trough moves to the east. All areas will see northwest winds on Sunday, with gusts east of the crest in the mid 30s. The northwest flow will continue on Monday, but with much lighter speeds. A warming trend will begin Sunday as high pressure gradually builds in from the west. At the surface a north to northeast wind pattern will enhance the warm and dry conditions from the lower western slopes of the Sierra to the coastal mountains Sunday through Wednesday. The strongest winds will reach 25 mph or so in the northern and western Sacramento Valley early Monday and early Tuesday. Another dry low pressure trough will move in during the second half of next week.

SOUTHERN CALIFORNIA

A strong ridge of high pressure off the Southern California Coast will cause temperatures to remain around 5 degrees above normal today, with 80s to low 90s in the mountains and mid 90s to 105 in the valleys. Minimum humidity will be in the single digits and teens away from the coastal areas today. The ridge of high pressure will weaken as a trough moves inland over the Pacific Northwest bringing a slow cooling trend and a little increase in humidity to the region Saturday through early next week. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the mountain ridges and desert passes this weekend. There will also be northerly winds of 15 to 25 mph with gusts to 40 mph across the south coast of Santa Barbara and the Grapevine tonight and Saturday night. The trough over the Pacific Northwest will drop southward into California Wednesday through the end of next week bringing below normal temperatures to the region. This trough will also bring gusty westerly winds to the mountains and deserts and a deep marine layer to the coastal areas.
